

# Dear

# Owner Builder Partner,

## What we do

**yip** supplies custom cabinetry, flooring, surfaces and other building products through a standards-led supply model designed to support well-prepared residential projects. We manage sourcing, logistics, quality control and compliance, helping bring more structure, clarity and reliability to the supply side of the job.

Our process starts from a clear quoting baseline. To move forward well, we need the minimum base of project information - predominantly the specifications we are being asked to quote - before moving into detailed selections. That helps keep scope clear, decisions grounded, and the process easier to manage.

We are standards-led in how we approach quality, specification and support. Our products are regularly tested locally through our NATA-accredited laboratory partner, and our minimum standards are built into the way we work.

## How we work

We recognise that owner-builders are acting as builders in their own right. You are coordinating trades, controlling spend, making decisions and carrying responsibility for the outcome of your kitchen.

For the right projects, yip can support that with clearer specification-led quoting, stronger documentation and a more dependable supply process. Where helpful, we can also help connect designer support to assist with selections and refinement once the quoting baseline is in place.

The project remains led by you. Your preferences and approvals continue to drive the outcome, which helps keep control where it belongs and makes the process clearer from the outset.

## What you get

We will provide you:

- A quote-first process based on your specifications
- Standards-led product selection
- Strong product standards
- Dependable supply coordination
- Smoother progression from quoted scope to final selections
- Designer support access where needed
- Access to trade pricing
- Access to yip partner network
- Reduced supply-side friction

## Let's talk about whether there is a fit.

If you think your project may be a fit, get in touch and we will arrange a conversation. We also have deeper documentation ready to share where helpful.
